EDUCATION

University of Melbourne, Melbourne   July 2018 - November 2020

Masters of Engineering, Electrical Engineering.

University of Melbourne, Melbourne   July 2015 - July 2018

Bachelor of Science, Bio-engineering-Systems.

Coursework: Data Structures & Algorithms, Object Oriented Design, Cloud Computing. Embedded Systems, Computer Networking, Control Systems, Signal Processing, Circuit Design.

WORK EXPERIENCE

University of Melbourne   July 2019 - August 2019

Research Assistant

Project : Spatially Adaptive Photographic System

- Integrated system processes by developing a TCP/IP socket system with Python and C.
- Designed a caching mechanism on Python socket server using multiprocessing.
- Configured Linux unit system files to automate program execution on RaspberryPi.
- Consistently documented project work through commits and README on GitHub.
- **Utilized**: Raspberry Pi, C++, Python, I2C, Git, Linux, Socket Programming, Multi-Processing.

University of Melbourne   Jan 2018 - Feb 2018

Research Assistant

Project : EMU Upper Limb Rehabilitation Robot

- Proposed mechanical solutions for current robot design, reducing material costs to about 20%.
- Taught myself Computer Aided Software Design on SolidWorks.
- Collaborated & communicated with supervisors for feedback to improve designs.

PROJECTS

Online C Web Editor and Compiler — (Link to Application, GitHub Link)

- Developed an online web IDE , allowing users to edit, compile and run C code.
- Implemented RESTful and OOP based web server using C++ and Poco Libraries.
- Designed front end user interface with HTML, CSS and Javascript Bootstrap.
- **Utilized**: C++, AWS, Git, HTML, CSS, Javascript, Bootstrap, RESTAPIs, JSON.

Twitter Analytics Cloud Project — (GitHub Link)

- Developed scripts using Ansible to perform cloud provisioning & setup a scalable cluster system.
- Managed cloud resources on Linux based cloud instances using SSH and Bash.
- Collaborated with group members in an Agile environment using ZenHub.
- **Utilized**: Ansible, SSH, Bash, Linux, Git, CouchDB, Docker, Apache2, ZenHub.

IoT Greenhouse Management System — (Link to Application, GitHub Link)

- Developed a web application that reads live data from humidity, temperature, soil moisture sensors.
- Designed responsive front-end user interface using Materialize, Chart.js and JQuery.
- Programmed ESP8266 web server in C++ and Arduino to handle requests from web client.
- **Utilized**: JQuery, Materialize, Chart.js, Express.JS, RESTAPIs, ESP8266 WiFi.

Embedded Electronic Game Console — (GitHub Link)

- Programmed games such as Pong and Flappy Bird using C and AVR Studio.
- Implemented serial communication between micro-controller to external modules using SPI.
- Designed PCB board on Altium and soldered on components.
- **Utilized**: C, SPI, AVR Studo, Embedded Systems, PCB design, JTAG, soldering, Altium.

EXTRA-CURRICULAR

Volunteer Experience

- Volunteered with a group of medical staff to provide medical treatment to villages in Manila.

Sports

- Represented Victoria in the Under-22 National Championships in 2017.
- Represented Melbourne University's Ultimate Frisbee Team for Australian Uni Games from 2015 to 2019.
